Cover Letter: AI Engineer

EveryMatrix Lviv 2026-07-05

Dear EveryMatrix Hiring Team,

I am writing to apply for the AI Engineer position in Lviv. As an AI Agent Architect deeply immersed in the latest LLM technologies, I admire EveryMatrix's commitment to innovation in the iGaming sector and am eager to contribute to your groundbreaking solutions.

I specialize in developing and implementing AI agents focused on automating business processes and optimizing sales funnels. My unique combination of deep technical expertise in RAG architectures and marketing experience allows me to create agents that not only function reliably but also drive real business value through lead conversion and customer support automation.

- **Designed and deployed a Python-based RAG customer support agent for a bus ticket company using Docker, State Machines, and internal API integrations.**, Successfully offloaded 10 live operators by implementing complex prompt engineering for escalation logic and enabling real-time data retrieval, significantly reducing operational costs.
- **Built an automated n8n workflow for B2B lead qualification utilizing OpenAI API and Pipedrive CRM integration.**, Drastically reduced the first response time from 4 hours to 3 minutes by automating lead capture, AI analysis, and CRM entry without human intervention.
- **Developed a Voice AI agent for a real estate agency featuring advanced RAG, query rewriting, and hybrid search capabilities.**, Enabled autonomous client consultation for property inquiries with high accuracy, using HITL escalation only for edge cases to maintain service quality.

EveryMatrix needs scalable, intelligent workflows that enhance automation without sacrificing reliability. My background in building state-machine-driven agents and optimizing retrieval pipelines directly addresses this by ensuring your AI solutions are robust, cost-efficient, and capable of handling the dynamic nature of iGaming data. I can help your team transition prototypes to production-ready systems that effectively reduce manual workload and improve user experience.

I am confident that my skills in AI automation and Python backend engineering will be a great asset to your team. I look forward to the possibility of discussing how I can contribute to EveryMatrix's continued innovation.
