Cover Letter: AI/ML Engineer

Interloom Technologies GmbH Berlin 2026-07-05

Dear Interloom Hiring Team,

I am writing to express my strong interest in the AI/ML Engineer position at Interloom. Your vision of a navigation system for work that utilizes a living context graph to capture operational knowledge is exactly the kind of challenge I am passionate about solving.

As an AI Agent Architect with a deep focus on Python backend development and RAG pipelines, I specialize in creating autonomous systems that bridge the gap between raw LLM capabilities and concrete business outcomes. My experience spans building complex multi-agent workflows, integrating with real-time APIs, and designing evaluation frameworks that ensure agents act reliably on specific data rather than generic training sets.

- **Developed a robust RAG-based customer support agent using Python State Machine and Docker for a bus ticket company.**, Successfully offloaded the workload of 10 live operators by autonomously handling complex queries regarding refunds, schedules, and route changes with high accuracy.
- **Engineered an automated lead qualification workflow using n8n and OpenAI API, integrated with Pipedrive CRM to score and segment leads.**, Drastically reduced the first response time from 4 hours to 3 minutes, significantly increasing the speed of the sales funnel.
- **Architected a voice AI agent for a real estate agency featuring advanced query rewriting, hybrid search, and HITL escalation.**, Enabled the system to provide accurate property consultations autonomously while maintaining a safety net for edge cases.

Interloom requires agents that are safe, observable, and capable of handling failure modes in enterprise environments. My background in designing multi-level escalation logic and state machines directly addresses your need for robust error handling and recovery paths. I have practical experience minimizing hallucinations through rigorous retrieval scoring and building evaluation frameworks that test agents across multi-step workflows, ensuring the details matter approach you value for clients like Zurich Insurance and JLL.

I am confident that my technical expertise in agent orchestration and my focus on production reliability make me a strong fit for your team. I look forward to the possibility of discussing how I can contribute to Interloom's success.
