## Cover Letter: AI Prompt Engineer

Luxoft Kyiv 2026-07-05

Dear Luxoft Hiring Team,

I am writing to express my strong interest in the AI Prompt Engineer / AI Integration Engineer position. With a background in architecting autonomous AI agents and integrating LLM capabilities into production environments, I understand the specific challenges of applying AI to complex engineering workflows.

I am an AI Agent Architect who combines deep technical expertise in LLM architecture with a practical focus on business automation. My core strength lies in designing robust RAG pipelines, advanced prompt engineering strategies, and state machine logic to ensure AI agents deliver accurate, reliable results within web applications.

- **Developed a Python state machine and RAG-based support agent for a bus ticket company, integrating with internal APIs for real-time data retrieval and ticket status checks.**, Successfully offloaded the workload of 10 live operators by minimizing false escalations through advanced prompt engineering and context-aware dialogue management.
- **Built a voice AI agent for a real estate agency using hybrid search, query rewriting, and custom embedding models to handle client inquiries autonomously.**, Delivered a fully autonomous consultation system capable of answering complex property questions with high accuracy, escalating only edge cases to humans.
- **Designed an n8n workflow for B2B lead qualification using OpenAI API to analyze leads against ICP criteria and automatically populate CRM fields.**, Reduced the lead response time from 4 hours to 3 minutes, significantly increasing conversion rates through immediate, AI-driven engagement.

Luxoft needs to integrate AI into specialized engineering domains like drilling and completion software where precision and data integrity are paramount. My superpower is designing RAG pipelines and validation frameworks that effectively eliminate hallucinations by grounding LLM responses in technical documentation. I can help your team define best practices for responsible AI usage by implementing systems that validate outputs against engineering data standards.

I am confident that my hands-on experience with RAG, prompt engineering, and system integration makes me a strong fit for Luxoft. I look forward to discussing how I can help drive AI adoption in your engineering products.
