Cover Letter: AI Product Engineer / AI Solutions Engineer

Red Rocket Software Kyiv 2026-07-05

Dear Hiring Team at Red Rocket Software,

I am writing to express my strong interest in the AI Product Engineer / AI Solutions Engineer position. Your emphasis on using AI as a force multiplier to rapidly validate ideas and automate business processes aligns perfectly with my expertise in bridging technical architecture with tangible business outcomes.

As an AI Agent Architect, I possess a unique combination of deep technical skills in LLM architecture and a practical marketing background. I specialize in designing autonomous agents and RAG pipelines that not only automate tasks but actively optimize sales funnels and customer interactions. My approach relies heavily on AI-assisted development, allowing me to build functional MVPs and complex systems significantly faster than traditional methods.

- **Architected and deployed an AI support agent for a bus ticket company utilizing RAG, Python state machines, and internal API integrations.**, Successfully offloaded 10 live operators by implementing sophisticated escalation logic and real-time data retrieval, ensuring high service quality without human intervention.
- **Engineered an n8n automation workflow for B2B lead qualification using OpenAI API and Pipedrive integration.**, Drastically reduced the first response time from 4 hours to 3 minutes and automated the segmentation of leads, directly improving conversion rates.
- **Developed a voice AI agent for a real estate agency featuring hybrid search, query rewriting, and HITL escalation.**, Enabled fully autonomous client consultations with high accuracy, handling complex property inquiries while escalating only edge cases.

You are looking for a generalist who can quickly translate unclear business requirements into structured technical solutions. My superpower lies in my dual perspective: the marketing acumen to understand the 'why' behind a feature and the technical prowess to execute the 'how' using AI agents and automation tools. I address the challenge of development speed by leveraging AI to write code and orchestrate workflows under my supervision, delivering robust prototypes that create immediate business value.

I am confident that my ability to rapidly prototype AI-driven solutions makes me a strong fit for Red Rocket Software. I look forward to the opportunity to discuss how I can help your team accelerate product delivery and automate complex workflows.
