Cover Letter: AI Engineer

Streamline Kyiv 2026-07-05

Dear Hiring Team at Streamline,

I am writing to apply for the AI Engineer position. I was immediately drawn to your vision of evolving agents from co-pilots to genuinely autonomous actors within supply chain planning. My background in building production-grade AI agents that execute complex workflows aligns perfectly with this mission.

I am an AI Agent Architect who specializes in bridging the gap between LLM capabilities and business outcomes. I combine deep technical expertise in RAG and orchestration with a product-focused mindset, ensuring that the agents I build don't just process information, but actively solve problems and drive efficiency.

- **Developed a Python state machine and RAG-based support agent integrated with internal APIs for a bus ticket company.**, Successfully offloaded 10 live operators by implementing sophisticated escalation logic that minimized false positives and handled real-time booking resolutions.
- **Designed and deployed an n8n automation workflow for B2B lead qualification using OpenAI API and Pipedrive integration.**, Slashed the lead response time from 4 hours to 3 minutes and ensured 100% automated CRM data entry for qualified prospects.

You need engineers who can navigate the transition from assistance to full autonomy while maintaining reliability. My experience with human-in-the-loop architectures and tool calling ensures your agents can handle supply chain tasks independently while knowing precisely when to escalate. I am comfortable with the practicalities of shipping—managing Docker containers, optimizing for latency, and setting up robust evaluation frameworks to guarantee performance.

I am eager to bring my ownership mindset and technical skills to Streamline to help build the next generation of autonomous agents. I look forward to discussing how I can contribute to your team's success.
